### EXAMINER'S AMENDMENT

1. **An examiner's amendment to the record appears below.** Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR

1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

This application is in condition for allowance except for the presence of claims 9-11 to an invention non-elected without traverse. Accordingly, claims 9-11 have been cancelled.

Cancel claims 9-11.

2. **The following is an examiner's statement of reasons for allowance:**

Claims 1-8 and 12-19 are found allowable over the prior art processes for the following reason:

Suda et al (2002/0000169) teach forming the hydrophobic layer on top of the titanium oxide layer in an imagewise manner then using ultraviolet light to decompose the entire layer to regenerate the titanium oxide hydrophilic surface. There is no imagewise exposure of the hydrophobic layer to UV. In Suda et al, see particularly Fig. 2, and [0012-0021, 0028-0030, 0052, 0054, 0060-0061, 0065-0071, 0074, 0083, 0095, 0102, 0105, 0112, 0115, 0124]. The method of forming the hydrophobic image in Suda et al does not make obvious the instant method of image formation.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. **The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.** Suda et al (2004/0129159 A1) discloses a process similar to that of applicants but the date of Suda et al fails to make it prior art. It is the Second Embodiment starting at [0072] of Suda et al that is of interest. The claims of Suda et al do not specify imaging at the instant "far-ultraviolet light having a wavelength of 250 to 320 nm" as required in all of the instant processes. In [0017] of Suda et al is found that for the photocatalyst conventional techniques of using ultraviolet light (having an wavelength of 380 nm or shorter). With respect to the actual activating energy used in the second embodiment, Suda et al in [0081] discloses using the same as the First embodiment. The first embodiment in [0034] discloses using between 380 nm through 600 nm. Thus, the examiner sees no issue of interference with the claims present in Suda et al and the allowed claims in this application.

4. The drawings were received on June 29, 2004. These drawings are acceptable.
